DETAILED ACTION

Response to Amendment

This Office Action is in response to the amendment filed October 18, 2004.

Accordingly, claims 2 and 3 were cancelled and claims 1 and 7 were amended.

Claims 8-15 remain withdrawn from consideration as being directed to a non-elected invention.

Currently, claims 1 and 4-7 are active in this application.

Response to Arguments

Applicant's arguments with respect to the amended claims have been considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Art Unit: 2822

Claims 1 and 4-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art (FIG. 1; Specification, paragraphs [0014] to [0017]) in view of Suwanai et al. (U.S. 5,994,762).

Re claims 1 and 4-7, the admitted prior art ("APA") discloses in FIG. 1 a crack stop for an integrated circuit (IC) chip having an active circuit area, comprising: the IC chip including metal layers (M1 to M4) separated by capping layers 16, a top aluminum layer, and copper metal interconnects 18 which do not form a self-passivating oxide layer, in a low-K dielectric material (BPSG); a moisture barrier/edge seal 12 (metal stack: metal lines 22 and via bars 24) positioned along the outer peripheral edges of the active area 10 of the IC chip; a crack stop formed by at least a metal stack outside of the moisture barrier/edge seal 12 on the outer periphery of the IC chip, for preventing damage to the active area of the IC chip caused by chipping and cracking formed along peripheral edges of the IC chip during a dicing operation performed on the IC chip (see Specification, paragraphs [0014] to [0017]).

Re further claims 1, 6 and 7, the APA discloses the crack stop being formed by at least a metal stack <u>instead of</u> a trench or void region.

Suwanai et al. ("Suwanai"), cited in previous office action, suggests in FIG. 2 the use of a crack stop comprising a trench or void region "S" for the purpose of stopping the development of cracks [see col. 9, ln. 12-35]. Suwanai further discloses the crack stop comprises a plurality of trenches or void regions S and S' [see col. 12, ln. 16-34].

Since the APA and Suwanai are both from the same field of endeavor, the purpose disclosed by Suwanai would have been recognized in the pertinent prior art of the APA.

Art Unit: 2822

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the crack stop of the APA in the manner as suggested by Suwanai, since Suwanai states at column 9, lines 37-42 such modification would prevent moisture or contaminating materials from reaching the inside of the chip through the cracks formed.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP § 706.07(a).

Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Khanh Duong whose telephone number is (571) 272-1836. The examiner can normally be reached on Monday - Thursday (9:00 AM - 6:00 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Amir Zarabian can be reached on (571) 272-1852. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
